

TAPE AND REEL

Electronic components and mechanical parts

HaS Lanškroun s.r.o. company is active in taping of supplied components or parts into plastic tape for subsequent use by pick and place machines. In some cases taping into a paper tape might be an option to the plastic tape.

HaS Lanškroun s.r.o. has got long years of experience with taping atypical products even in small quantities and can modify own equipment or jigs to suit the particular order.

The kind and shape of packing tape can be adapted to specific dimensions of the Customer's product. The minimum tape width is 8 mm. Reels, onto which the tape with packed products is wound, have a standard series of dimensions compatible with the pick and place machines.

Besides of standard taping also following options are feasible:

- (a) Re-taping from tape to tape and on that occasion eg. measurement of the components,
- (b) Packing the products from a "matrix tray" into tape or vice versa,
- (c) Packing the products from a plastic tube into tape.

In case of taping nonstandard parts where no standards are available, it is convenient to design an individual tape and its cavities. For such action, following information is required from the Customer:

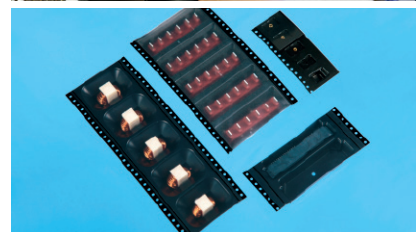

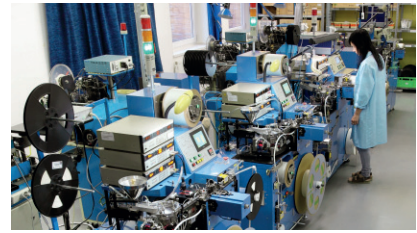

- (a) A drawing of the part (component),
- (b) Instructions regarding the orientation in the tape or, possibly, a sample of previous taping.

HaS Lanškroun s.r.o. company has got own machines for an automatic taping that can be adapted to a specific Customer's component, and these machines are capable even to make electrical testing of individual components before their insertion into the tape. The company also owns equipment for manual insertion in case of more spacious products.

Typical delivery terms:

- (a) A specifically designed tape for nonstandard dimensions of components or parts: first shipment after 6 weeks.
- (b) Standard tape: first shipment after 1 to 2 weeks.

The Customer can count with a flexible approach to the order. HaS Lanškroun s.r.o. company provides consulting and their experienced representatives are ready to discuss technical solutions of nonstandard orders for any quantities of taped units.
